

Luotea Hackathon – Jury Evaluation Criteria

Maximum score: 25 points

Criterion	Points
1. Impact on real estate business	1–5
2. Use of data and analytics	1–5
3. Feasibility and scalability	1–5
4. Innovation and distinctiveness	1–5
5. User, customer and operations perspective	1–5
Total	5–25

General scoring scale

Poi nts	Description
------------	-------------

5	Excellent: highly convincing, clearly justified and directly suitable for further development
4	Good: a strong solution with only minor need for refinement
3	Satisfactory: the idea is understandable, but the impact, implementation or reasoning requires further development
2	Weak: the solution has some interesting elements, but the overall concept remains unclear or incomplete
1	Insufficient: the criterion is met only to a very limited extent, or not at all in practice

1. Impact on real estate business — 1–5

Evaluate how much value the solution could generate in Luotea's operating environment.

A high score should be given to a solution that:

- solves a clear and meaningful problem related to property maintenance, usability, energy consumption, indoor conditions, space utilization or lettability
- supports predictive maintenance or smarter building operations
- can reduce costs, improve service levels, reduce risks or increase the long-term value of the property
- demonstrates an understanding of the practical realities of the real estate sector

Scoring:

Points	Description
---------------	--------------------

5	Very significant and credible business or operational benefit
4	Clear benefit and a well-identified target group
3	Interesting idea, but the impact or magnitude of the benefit needs clarification
2	The benefit remains relatively general
1	The impact on real estate business is unclear or limited

2. Use of data and analytics — 1–5

Evaluate how appropriately the team uses available data, analytics, AI or modelling.

Assess in particular:

- how well the team understands the quality, limitations and opportunities of the available data
- whether the analysis, model or algorithm is appropriate for the problem
- whether insights, decision support or forecasts have been derived from the data
- whether the team has made justified assumptions when all required data has not been available
- whether the solution is transparent and explainable to the user

Scoring:

Points	Description

5	Excellent use of data; the analysis is well-founded, useful and insightful
4	Good data-driven approach, with methods and conclusions that are mostly credible
3	Data has been used, but the connection to the solution or conclusions needs clarification
2	The use of data remains superficial or partly unclear
1	The solution makes little use of data, or the use of data is unclear

3. Feasibility and scalability — 1–5

Evaluate how realistically the solution could be continued after the hackathon.

Assess in particular:

- whether the solution is technically, operationally and organizationally feasible
- whether it could be piloted in a real property
- whether the solution requires a reasonable amount of integrations, data, process changes or changes in user behaviour
- whether the solution only works in a single case, or whether it has potential to scale across multiple properties or customer groups
- whether the team has identified risks, dependencies and next development steps

Scoring:

Points	Description

5	Clearly pilotable and scalable; the path forward is credible
4	Feasible solution with clear further development potential
3	Possible to implement, but the implementation path needs clarification
2	Implementation appears uncertain, heavily dependent on external factors or difficult to adopt
1	The solution appears unrealistic or difficult to pilot

4. Innovation and distinctiveness — 1–5

Evaluate whether the solution brings a new perspective to property maintenance, operations or value creation.

A high score should be given to a solution that:

- combines data, technology, user understanding and business in a new way
- identifies an essential but less obvious perspective on the problem
- is not merely a generic dashboard, chatbot or analytics concept without a clear real estate application
- stands out from other solutions through a clear idea, implementation or impact logic

Scoring:

Points	Description
5	Highly insightful and distinctive solution

4	Fresh and well-targeted approach
3	Functional, but relatively conventional solution
2	Some novelty value, but limited distinctiveness
1	Little novelty value or distinctiveness

5. User, customer and operations perspective — 1–5

Evaluate how well the solution takes into account real users and everyday operations.

Assess in particular:

- whether the user or decision-maker is clearly defined
- whether the solution makes everyday work easier or improves decision-making
- whether the usage situation is understandable
- whether the solution considers the needs of maintenance, property management, real estate managers, customers, tenants or end users
- whether the results of the solution are presented in a format that helps people take action

Scoring:

Points	Description
5	The user and use case are very clear and convincing
4	Good user orientation and an understandable usage situation

3	The user benefit has been identified, but the usage path needs clarification
2	The user or operations perspective remains general
1	The user or practical use case remains unclear

Recommended evaluation form for the jury

Team	Impact 1–5	Data & analytics 1–5	Feasibility 1–5	Innovation 1–5	User perspective 1–5	Total 5–25	Notes
Team 1							
Team 2							
Team 3							

Supporting questions for selecting the winner

If the scores are close, the jury can use the following questions to support the discussion:

1. Which solution would be the most interesting to pilot with Luotea next?
2. Which solution makes the best use of real property data?
3. Which solution creates the clearest benefit for the customer or property user?
4. Which solution is the most credible from the perspective of 3–6 months of further development?

5. Which team demonstrated the strongest learning ability, problem-solving skills and ability to ask the right questions?
